Using The Database	38

Database Set-Up Procedure

Download & Install POSTGRESQL

Download Postgres from <https://www.enterprisedb.com/downloads/postgres-postgresql-downloads>.

Follow Installation Instructions.

Note down the Super User Name & Password Set During Installation

Adding psql to PATH in Windows

Edit The system PATH To include C:\Program Files\PostgreSQL\12\bin

This will allow you to query psql in command prompt.

Database File Structure

The Database configuration files are split into the following files

>>database.BAT

>>dataBaseSetUp.sql

>>primaryTables.sql

>>auditHistoryTables.sql

>>lookUpCheckTables.sql

>>primaryTablesConstraints.sql

>>lookUpCheckTablesTriggerFunctions.sql

>>primaryTablesTriggerFunctions.sql

>>lookUpCheckTablesTriggers.sql

>>primaryTablesTriggers.sql

>>views.sql

Sample Data

Sample Data to populate all the tables in the data base.

>>sampleData.sql

>>vehicles.sql

>>drivers.sql

>>purchase_details.sql

>>maintenance.sql

>>petrol_cards.sql

>>damages.sql

>>vehicle_millage.sql

>>fines.sql

>>fuel_cost.sql

>>vehicle_location.sql

Setting Up the Data Base

Edit the dataBaseSetUp.sql file:

Change the first line to: \c {default database name} {super user name}

Change the role name and password on line 2 as desired

Change line 5 to: GRANT ALL PRIVILEGES ON DATABASE fleet_management TO {role name};

Change line 7 to: \c fleet_management {role name}

Open CMD and type: psql {default database name} {super user name}

Enter password for superuser

Type: \i 'C:/Users/Viveshan Govender/Desktop/Fleet Management/setupDataBase.sql'

Enter password for role

The data base is now created

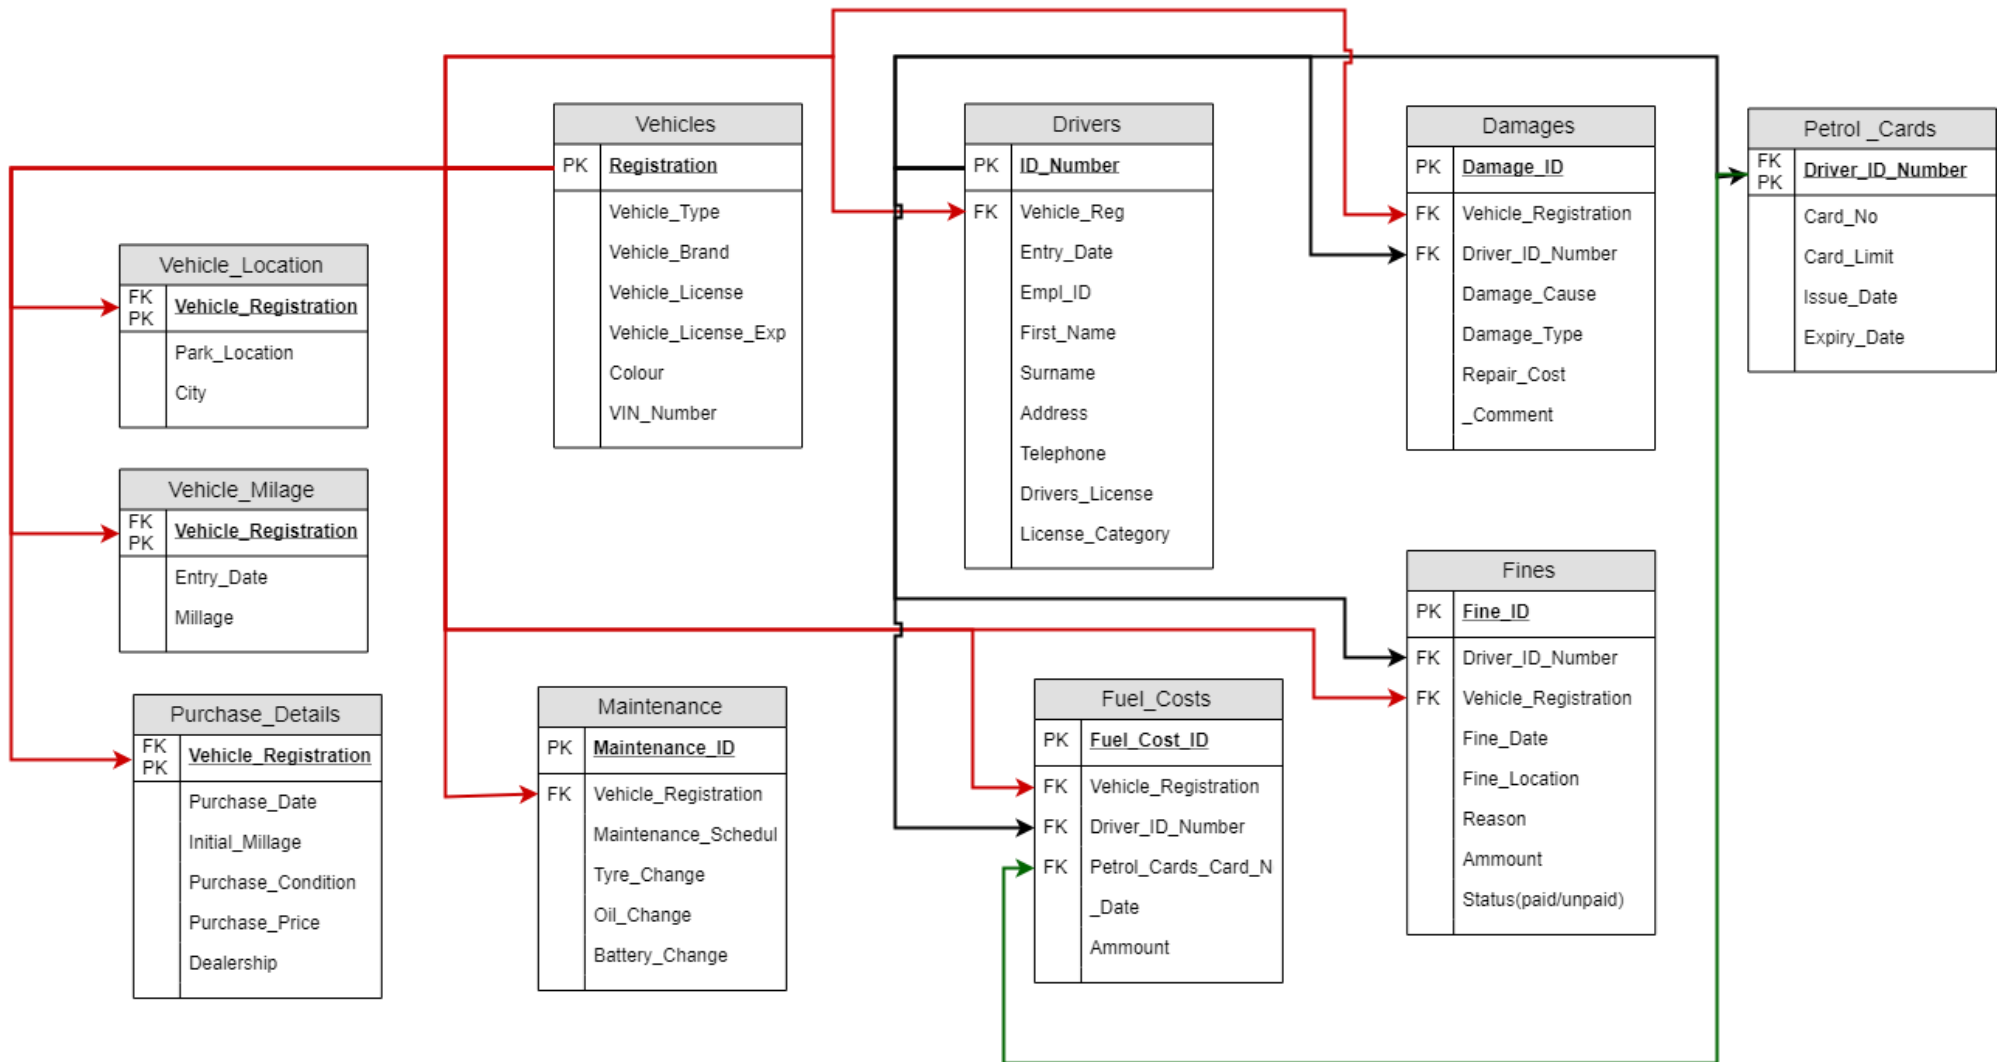

To enter the sample data:

While connected to the database type: \i 'C:/Users/Viveshan Govender/Desktop/Fleet Management/sampleData.sql'

Look-Up / Check Tables Structure

Table: License_Category_chk

Table: Vehicle_Type_chk

Views

Views are stored queries of tables in the database, the view 'tables' do not exist in the database but serve to make querying easier.

A view can be called just like any other query, for ex. >>SELECT * FROM fines_by_driver_name;

All Views In Current Schema

View Name
fines_by_driver_name
net_fines_by_driver_name
vehicles_order_by_license_exp
vehicle_allocation
petrol_card_allocation
all_fuel_costs
net_fuel_costs

View: fines_by_driver_name

Columns

fines_by_driver_name					
	NAME	N	U	DATA TYPE	DESCRIPTION/ATRIBUTES
	Driver First Name				
	Driver Surname				
	Fine Date				
	Status				
	Ammount				

View: net_fines_by_driver_name

Columns

net_fines_by_driver_name					
	NAME	N	U	DATA TYPE	DESCRIPTION/ATRIBUTES
	Driver First Name				
	Driver Surname				
	Sum of Fines				
	Number of Fines				
	Ammount				

View: vehicles_order_by_license_exp

Columns

vehicles_order_by_license_exp					
	NAME	N	U	DATA TYPE	DESCRIPTION/ATRIBUTES
	vehicle_license_exp				
	vehicle_brand				
	registration				
	vehicle_license				

View: vehicle_allocation

Columns

vehicle_allocation					
	NAME	N	U	DATA TYPE	DESCRIPTION/ATRIBUTES
	registration				
	vehicle_brand				
	vehicle_type				
	colour				
	first_name				
	surname				

View: petrol_card_allocation

Columns

petrol_card_allocation					
	NAME	N	U	DATA TYPE	DESCRIPTION/ATRIBUTES
	first_name				
	surname				
	card_no				
	card_limit				
	expiry_date				

View: all_fuel_costs

Columns

all_fuel_costs					
	NAME	N	U	DATA TYPE	DESCRIPTION/ATRIBUTES
	first_name				
	surname				
	ammount				
	card_no				

View: net_fuel_costs

Columns

all_fuel_costs					
	NAME	N	U	DATA TYPE	DESCRIPTION/ATRIBUTES
	first_name				
	surname				
	Sum				
	Count				
	Card_no				

Installing The Database

In the databaseSetUp.sql file:

Change the first line to \c {default database name} {superusername}

Change the file paths preceding /Fleet Management/..... to the path where this folder is located

In the sampleData.sql file:

Change the file paths preceding /Fleet Management/sampleData..... to the path where this folder is located

In the databaseSetUp.BAT file:

Change the -U superusername and -d defaultDataBaseName to the new names

RUN THE databaseSetUp.BAT file and enter the password for superuser and role user as requested to create the database and insert sample data

Using The Database

To Connect to the database run the connecFleet_managent.BAT file or open cmd and type the following: psql fleet_management Viveshan

To run any of the View queries, open the query folder, and run the BAT file for the query. The files starting with CSV_ will return a csv file of the query with the name of the query and date and time

To use the excel validator open the dataValdationExcel Folder and open the macro Enabled workbook fleetManagement. Once the data has been entered in the table press the save for validation button, this will save an xlsx file with the table name in the cwd. Drag and drop this file on the validate.BAT file in the same folder to validate the file.
